...

Tin is a chemical element with the symbol Sn (from Latin: stannum) and atomic number 50. Tin is a silvery metal that characteristically has a faint yellow hue. Tin, like indium, is soft enough to be cut without much force. When a bar of tin is bent, the so-called "tin cry" can be heard as a result of sliding tin crystals reforming; this trait is shared by indium, cadmium, and frozen mercury.

Tin - Wikipedia

Tin (Sn), a chemical element belonging to the carbon family, Group 14 (IVa) of the periodic table. It is a soft, silvery white metal with a bluish tinge, known to the ancients in bronze, an alloy with copper. Tin is widely used for plating steel cans used as food containers, in metals used for bearings, and in solder.

tin | Definition, Properties, Uses, & Facts | Britannica

Tin (Sn) is a metal. It can exist by itself or as part of a tin compound. Tin compounds form when tin combines with other elements such as chloride, fluoride, sulfur, or oxygen. The most common...

Tin: Uses, Side Effects, Interactions, Dosage, and Warning

Definition of tin (Entry 1 of 3) 1 : a soft faintly bluish-white lustrous low-melting crystalline metallic element that is malleable and ductile at ordinary temperatures and that is used especially in containers, as a protective coating, in tinfoil, and in soft solders and alloys — see Chemical Elements Table

Tin | Definition of Tin by Merriam-Webster

A taxpayer identification number (TIN) is a unique nine-digit number used to identify an individual, business, or other entity in tax returns and other documents filed with the Internal Revenue...

Taxpayer Identification Number (TIN) Definition
